31 December 2002:

Total number of animals: 30

Remarks:

- We welcome three new members this year.
- Due to the death of his females this year no offspring for Thomas Lakowitz. In 2003 he will be supplied with new animals.
- A surplus of 8 males are in July released in the hot greenhouse of the Hortus Botanicus of the University of Utrecht. A board with information about the animals is placed in the greenhouse. Three month later in october two healthy, displaying males were observed on trunks, at a height of 2 meters. They were feeding on ants.
- There was a mysterious death of 2 females, Ab0015, age 29 months and Ab0036, age 11 months within a short period on location NL1. The results of a section by a veterinary surgeon were negative. Parasites nor infections were found. The only possibility seams a disbalance in the absorption of vitamins and/or minerals.
