1. INTRODUCTION AND ACTIVITIES IN 2003

Reports in 2002 showed the eventful beginning of a new studbook. During the start up, the ESF was asked by the Turtle Survival Alliance (TSA) to admit 40 animals into the studbook. They belonged to a group of 100 Geochelone elegans which were confiscated in Hong Kong. Eventually, 39 arrived at Schiphol Airport. The little Indian Star Tortoises, with an average weight of about 60 grams, were distributed under contract over ten locations. They seemed to be in good condition, but it soon proved otherwise. This was already mentioned in the annual report over 2002. On 31 December 2002, 27 of the 38 animals had survived. Like the studbook holder was already expecting, this was not the end of it. Animals in the group kept dying until 2 July 2003. Since then, 12 have survived.

In the mean time, a little more than half of the animals are growing well, while the rest is weighing as much as when they arrived at the various locations. They are eating well, however, are free of parasites and look lively. Therefore, the hope remains that they will soon start growing as well.

By way of TSA-USA, 40 G. elegans of the same confiscated batch went to the United States. They were placed there as a group under the care of a veterinarian and treated for internal parasites. Some time after, they went to a number of private persons. By the fall of 2003, six animals had survived in this group. Why did Europe do better? We can only guess. Maybe the European animals were in a better condition. The studbook holder thinks it probable that there were other reasons. Immediately after arrival, the European animals were housed at ten different locations in order to minimize the risks. It appeared furthermore, that the (medical) care at the different locations differed considerably sometimes. Based on the reports which the participants sent to the studbook holder, it is uncertain what the right therapy was. Almost all animals had oedematous swellings in the groin area. One of the consulted veterinarians ascribed this to prolonged periods of malnourishment and dehydration. The prescribed therapy was a daily bath in lukewarm water enriched with electrolytes. The goal was to let the animals catch their strength in relative peace. Only then were the internal parasites tackled. This was almost certainly the right choice. At other locations too, where initially some restraint was practised in force-feeding medication and where the little turtles were bathed daily it seems that more animals survived. What the most successful therapy was, cannot be made out from the reports. Certain is that on all locations everything has been done to save as many animals as possible. The studbook holder would therefore thank every participant, also in behalf of TSA-Europe for their enormous effort.

During 2003 the studbook was again confronted with a confiscation. On a French highway, about 60 five year old G. elegans were retrieved from a car trunk full of animals. The whole group was transferred to a French zoo, which consequently registered them with the studbook. No deaths were reported from France since then. On the website of ISIS (International Species Information System) however, 51 G. elegans from unknown origin are registered. It appears that at least 9 animals from this group have died.

The studbook holder has frequently been able to provide interested turtle enthusiasts with required or unsolicited information about G. elegans. In one case mediation has led to the exchange of two animals.
A publication in Trionyx, magazine of the Dutch Turtle Society, resulted in the application of only one new studbook participant with two unrelated animals. Because it is known to the studbook holder that *G. elegans* is kept in the Netherlands at several registered locations, the result is disappointing. It is not his intention to harass everyone with non-registered animals into registering them. A well functioning studbook consists of studbook participants and a studbook holder who are motivated. Turtle owners who do not (wholeheartedly) want to register their animals, should not participate. They should notice however, that they miss out on the benefits of participating in a studbook. I will gladly mention these benefits again.

By registering legal animals in a studbook:
- an international breeding program can be started;
- knowledge about the species will be gathered, which is conducive to optimising the care for these animals;
- makes it possible to exchange animals on an international level;
- the species will remain available to the hobbyist;
- makes it possible to help with knowledge and maybe in the future with animals, the conservation of wild populations;
- can stop or limit the amount of animals imported from the wild;
- makes it perhaps possible, after changing CITES legislation, to prove legal ownership of the animals.

2. STUDBOOK POPULATION
On 31 December 2003, 126 animals (7-10-109) were registered. At the date mentioned, 95 (6-10-79) were still alive.

3. STUDBOOK LOCATIONS
On 31 December 2003, 14 locations in the Netherlands, Germany and Belgium were registered. On 3 of these locations, animals were no longer kept at the date mentioned.

4. BIRTHS
No births were reported in 2003. The studbook holder however, knows of births at at least two studbook locations. In one case it concerns births from unregistered turtles. The intended participant has also some *G. elegans* owned by the studbook (Hong Kong-group). These are registered, of course. In 2002 the studbook has successfully used his ample experience and great knowledge about this species. It would be well when he would register his own animals and their young yet. It is possible that after some time these young enter the studbook as from unknown origin, which reduces their value for serious breeding purposes.

In the second case it concerns the first born young from animals that are registered in the studbook. The studbook holder assumes that they will be registered in the near future. In the previous paragraph the importance of studbook registration was already mentioned.

The studbook holder has furthermore knowledge of two locations in the Netherlands where breeding takes place with deliberately unregistered *G. elegans*. All these breeding results give much hope for the future, as most of the studbook animals are yet too young to breed.

5. DEATHS
In the period between 1 January 2003 until 2 July 2003, 15 studbook animals have died. They all belonged to the ‘Hong Kong-group’. At their time of death, all these animals weighed the same or slightly less than on their arrival at the locations. Of the remaining 12 turtles from this group, less than half has not gained weight or increased in length. After and thanks to the long but temporary intensive care by Rotterdam Zoo, one ‘Hong Kong-animal’ from the studbook holder, picked up as late as the end of September 2003. That is why he still hopes that all 12 surviving animals will live eventually.

6. TRANSFERS
Three transfers were conducted in 2003, some by mediation of the studbook holder. A very large female (26 cm) was gifted by Reptielenzoo IGUANA to the studbook under certain conditions. One
captive-bred animal changed hands and in a third case a Dutch studbook participant exchanged a
captive-bred male with a German turtle keeper against a captive-bred female. Because the private G.
elegans is not registered at the German location (see ‘births’) and is bred from parents from the wild, it
is certain that with this exchange a new bloodline has entered the studbook.

7. CONCLUSION

When the studbook holder took up the plan with the ESF to create a studbook for G. elegans, he
imagined that there was a relatively small number of these animals in captivity, especially in the
Netherlands. Good communication between the keepers, seemed to make sense to him. In the first
twelve months of its existence, 98 animals had to be registered, which were confiscated in Hong Kong
and France. While writing this report, the TSA was working on a rescue operation of 307 confiscated
animals, again from Hong Kong. The next annual report will deal with this extensively. It came to his
attention that a further two very large groups were confiscated in Asia. It always concerns very young
animals, so they are probably intended for the pet trade. Regarding the chances of survival for these
animals, this makes him very angry. Many people enrich themselves, paid for with the life of many
animals. The private turtle keeper is often blamed for this, because they are supposed to create a
demand for these animals. The truth is different. The commercial trade thinks they can create a
demand by supplying many animals and try to sell the animals for a large sum of money to
inexperienced persons. The above shows how important it is to have a well functioning studbook, by
which we can strive for excellent breeding results. In this way we can work on a payable supply of
young animals, which can be housed, with proper advise and guidance, by serious hobbyists. In this
way we can reduce the selling of animals from the wild in the commercial trade, or, even better, stop it
altogether. The studbook holder thinks that every true turtle lover will not hesitate to help. So, don’t
hesitate but participate in the studbook.

Like mentioned in the last paragraph, the TSA has rescued another 300 very small G. elegans in the
spring of 2004. Half of this number at most will come to Europe and will be housed under contract
with (new) studbook members (among which a few zoos). It is to be expected, therefore, that the
studbook holder will be mostly concerned with this group during this year. On basis of the experiences
of the participants of the ‘Hong Kong I project’, he will try to act as mediator to save as many turtle
lives as possible. Studbook participants who are not involved in this project, will perhaps not hear
much of him. But that does not mean he has forgotten them, he will be always ready to answer
questions or to mediate.

Last year the studbook holder was asked regularly for the addresses of breeders of G. elegans.
Sometimes it was possible to transfer the question to a participant of the studbook. In most cases the
advice was to place an advertisement in a magazine, for example that of the Dutch Turtle Society.
Sometimes the question was about caring and keeping G. elegans. These questions were always
answered by a reference to excellent publications in several magazines.

Below an overview of readable articles and internet sites about the Indian star tortoise.
Guidelines for publication on the ESF site are under construction.
