1. Introduction in 2004

This annual report will summarise of the studbook breeding programme of the mccords snake necked turtle (*Chelodina mccordi*).

2. Studbook populations

December 31, 2004 the total studbook population exist out of 21.29.131 (181) animals. The living population 12.16.41 (69) animals.

3. Locations

December 31, 2004 the 12.16.41 specimens were kept at 16 locations. 4 in the Netherlands, 5 in Germany, 2 in Austria, 2 in the United kingdom, 1 in Italy, 1 in South Africa, and 1 in the USA.

4. Births.

In 2004 from 5 locations (Hennig, Hoveling, Rotterdam zoo, Symanski and Zwartepoorte the last one incubated eggs from location hoveling) births are reported.

At location Hennig 7 baby's, Hoveling 2 baby's, Rotterdam zoo 2 baby's, Symanski 3 baby's and Zwartepoorte 10 baby's were born.

5. Imports.

In 2004 no imports were recorded.

6. Deaths.

In 2004, 12 deaths are reported.

4 adult animals died in 2004. The cause of deaths is unclear.

8 deaths concern a baby death, which means that baby's died within the first few months after birth.

7. Transfers.

In 2004, 5 transfers took place between private participants and 2 transfers took place between a private participant and zoo's.

8. Research

(source The Asian Turtle Crisis bulletin)

The Indonesian Turtle Working Group

Source: Rodrigo Ibarra Vazquez (Bonggi)

In December, the Indonesian Turtle Working Group was established at the Forestry University in Bogor, West Java. The first meeting attracted 25 university students with interest in herpetology.

According to Bonggi, the working group will become a base of operations for turtle work in Indonesia, and provide a means for students to become involved in turtle-related research and conservation activities.

Bonggi, a young Spaniard who became interested in turtles during a stint volunteering at the Cikananga Wildlife Rescue Center in Sukabumi, Java, lists major priorities for 2005 as including establishment of an Indonesian Turtle Conservation Center within the Samboya Lestari Conservation Complex in Balikpapan, Borneo, implementing measures to conserve the Rote Island snake-neck turtle (*Chelodina mccordi*), and further development of the Indonesian Turtle Working Group. Bonggi noted that members of the group were presently involved in a study looking at the farming of freshwater turtles in Indonesia to evaluate the success of farming methods, including the species currently breeding for commercial purposes, volumes produced, and the extent to which laundering is involved in sustaining these operations.

Efforts to Conserve the Rote Island Snake-neck Turtle

Source: Rodrigo Ibarrando Vazquez (Bonggi)

Recent surveys by Bonggi of Rote Island suggest that wild populations of the endemic Rote Island snake-necked turtle (*Chelodina mccordi*) remain under continued intense pressure from hunting, mainly to meet the demand of international pet markets. According to a recent report by Bonggi, only 21 individuals were caught last year (2004). Trappers are presently concentrating on a lake in the northern part of the island. Locals have also suggested that the species can be also found on the island of Timor, though no confirmation of this report has been made. Three different areas of Rote Island have been selected to initiate a project focused on reducing chemical inputs on agricultural land. The project is targeting sites that closely correspond to areas inhabited by the last remaining populations of *Chelodina mccordi*. In addition to hunting and trade, the Rote Island snake-necked turtle is also threatened by loss of habitat resulting from agricultural conversion and pollution from agricultural lands surrounding wetlands and lakes where the species remains.

A follow-up survey was carried out February 19 through March 5 by Bonggi and Chris Shepherd of TRAFFIC SEA looking at current levels of hunting and trade of the species. Bonggi noted that one very positive recent development was the hiring of "Joseph", a former hunter of 30 years on the island, as a field assistant for the Rote Island project. Efforts to conserve the last remaining wild populations of Rote Island snake-necked turtles is supported by the Turtle Conservation Fund (TCF) and Chelonian Research Foundation (CRF), in collaboration with TRAFFIC SEA, the Indonesian Animal Rescue Center Network, and Forestry Department of Indonesia.
