

## **Annual report 2007 Chelodina mccordi**

### **Contents:**

- 1 Introduction
- 2 Studbook population
- 3 Locations
- 4 Births
- 5 Imports
- 6 Deaths
- 7 Transfers
- 8 Discussion
- 9 References

### **1. Introduction**

This annual report will summarise the studbook breeding programme of the McCords snake necked turtle (*Chelodina mccordi*). Positive element of 2007 is the increase of captive births in three collections with an absolute record of 63 hatchlings at the Rotterdam Zoo.

### **2. Studbook populations**

December 31, 2007 the total studbook population exist out of 40.42.301 (383) animals. The living population 27.27.185 (239) animals.

### **3. Locations**

December 31, 2007 the 27.27.185 specimens were kept at 33 locations; 8 in the Netherlands, 13 in Germany, 2 in Austria, 3 in the United kingdom, 1 in Italy, 5 in Belgium, and 1 in France.

### **4. Births.**

In 2007 births are reported by 3 locations; 19 at location Zwartepoorte hatched from eggs donated by Hoveling, 7 at location Roempp and 63 at the Rotterdam zoo.

### **5. Imports.**

In 2005 no imports were recorded.

### **6. Deaths.**

In 2007 27 deaths are reported.

25 deaths concern death of hatchlings shortly after birth or during the juvenile phase.

### **7. Transfers.**

In 2007, totally 65 transfers took place. 23 transfers took concerned transfers from a zoo to private participants and 1 transfers concerned a transfer from a private participant to a 1 zoo; 23 transfers concerned between private participants and 18 transfers concerned a transfer among zoos.

### **8. Discussion.**

By the birth of a total of 89 specimens the studbook population showed an immense growth. These breeding results however only occur at three locations. The number of founder animals however is still low. At the Rotterdam Zoo the breeding group exist out of 2.2 adults (originally 3.2). A second unrelated breeding group is established; the animals are still a few years old making reproduction possible in 3 or 4 years time from now.

One important aim for the next few years to come is breeding by other participants than these three mentioned above and what is more important reproduction by specimens not related to the animals originated from the three locations mentioned above. Efforts will be done acquiring unrelated specimens into the studbook.

A few zoos obtained animals from the Rotterdam Zoo and through these transfers these zoos become ESF studbook participant. This is a very positive development and cooperation between these two TSA Europe partners ESF and EAZA regarding conservation of this critically endangered species becomes more in shape.

The Rotterdam Zoo decided to stop incubating eggs from the 2.2 breeding group since November 2007. I fully endorse this decision as these 2.2 breeding animals are very well represented into the studbook.

During the TSA meeting in St. Louis/USA in August 2006 exchange between the zoos of Rotterdam and the San Diego zoo is discussed by Zwartepoorte and Boyer. Unfortunately this exchange this did not happen at present.

This exchange would create new possibilities for acquiring unrelated at both location in both the US and Europe. Finally this year further initiatives will be developed for a global captive management plan. The IUCN specialist group will be asked for assistance and cooperation.

D.W.A. Fontijne, studbook keeper  
H.A. Zwartepoorte, co studbook keeper  
March 30, 2007.
